		1	2	3	4	5	6	7	8
rank									files

Enter the rank and files of the present location of the chess piece to be moved, and then enter the rank and files of the location it is to be moved to.

Move the king two spaces and the computer will check for castling.

For

1. en passant by a pawn
2. promotion of a pawn
3. board error (correction of the wrong move)

enter 0 for rank and then the location to be corrected and then the value of the chess piece at that location.
